Date taken: _____

PHYSICAL DESCRIPTION: Race _____ Complexion _____ Skin Tone _____

Sex _____ Height _____ Weight _____

DNA Collection

DNA analysis is a "genetic fingerprint." In its most simple terms, DNA is the fundamental building block that defines us as individuals. My DNA is exactly the same in every one of my cells and nobody else's DNA is exactly like mine.
 To collect DNA, you will need one cotton swab and two zip-lock plastic bags. Rub a clean (sterile if possible) cotton swab on the inside of cheek until moist. Let cotton swab air dry for twenty-four hours. When dry, place the cotton swab in a zip-lock bag and seal bag. Label it with permanent pen - child's name and sample date. Save it in the freezer until needed. Follow the same procedure for a blood sample. However, wait until child scrapes or cuts him/herself before taking sample. You may also save baby teeth in the same manner. If you don't have a cotton swab, you can also use sterile gauze or a clean piece of filter paper. Fingernail clippings and at least five hairs with the roots/follicles still intact should also be gathered as samples of DNA.

Child Identification Kit (pg. 2)

Natural Hair Color _____ If dyed, hair color _____

Describe Child's Favorite Hair Style _____

Eye Color _____ Does Child Wear Glasses? _____ Contact Lenses? _____

Regional Accent or Speech Impediment _____

Scars, Birthmarks, Pierced Ears, etc. (Note shape, size, color, and location) _____

Current Illnesses or Physical Disabilities _____

Type of Medication or Treatment _____

Doctor's Name _____ Address _____ Phone _____

Dentist's Name _____ Address _____ Phone _____

Name of School Child Attends _____ Address _____ Phone _____

Classroom Teacher's Name _____ Best Friend's Name _____ Address _____ Phone _____

RIGHT THUMB	RIGHT INDEX	RIGHT MIDDLE	RIGHT FOURTH	RIGHT PINKY
LEFT PINKY	LEFT FOURTH	LEFT MIDDLE	LEFT INDEX	LEFT THUMB

Fingerprints

If possible, have your child professionally fingerprinted by the police department or a local government agency. If this is not possible, practice fingerprinting your child on notepaper before applying prints to your I.D. Kit. A flat print is acceptable for identification when the center of the fingerprint is clear and unsmudged. Rolling the finger is not necessary, and may result in a smeared print.

1. Hold child's finger rigid, placing your forefinger over the cuticle area.

2. Lightly place child's finger on ink, then lightly apply to appropriate space at left.
